

## Environment and climate

Orskov Yard A/S acknowledges its environmental and climate responsibilities and is continuously working to identify, minimise, and prevent impacts on the environment and climate. Our objective is to comply with applicable requirements and legislation related to environmental and climate protection, and to continuously set new environmental and climate goals in line with technological and economic developments.

Orskov Yard A/S is certified according to ISO 14001.

Orskov Yard A/S realises its policy by:

- Continuously maintaining and developing our management system.
- Mapping environmental aspects and preparing risk assessments and action plans to minimise the risk of negative environmental and climate impact.
- Having a system that monitors applicable laws and regulations.
- Complying with our environmental approvals.
- Continuously follow, together with our partners, the development in raw materials, new technologies and equipment for production processes that can contribute to preventing or reducing the environmental and climate impact.
- Monitoring our climate impact and setting long-term goals.
- Controlling the use of chemicals and conducting risk assessments that ensure compliance with applicable laws and regulations.
- Focusing on the sorting of waste fractions for recycling and heat recovery.
- Performing internal audits and environmental inspections as well as ensuring follow-up on findings.
- Educating, training, and involving employees, suppliers, and customers.
- Ensuring that everyone working on behalf of Orskov Yard A/S is informed about the company's environment and climate policy and procedures in the management system.
